TTU PETR

The **Oilfield Technology Center (OTC)**, located 15 minutes from Texas Tech's main campus, is a field-scale facility that supports hands-on petroleum engineering curriculum and applied research. It gives students direct experience with real oilfield equipment and also serves industry needs through workforce training and testing of new downhole tools and production technologies. As Texas Tech advances the **Artificial Lift Center of Excellence (AL-COE)**, the OTC becomes a key platform for artificial-lift innovation, providing the test benches, training environment, and field-ready infrastructure needed to support the AL-COE research, product testing, and next-generation training initiatives.
